

# Dayak Suaid answers to oil palm development threats to landscape and environmental services

Presentation for Satoyama Initiative for Regional Workshop in Sabah, Malaysia 18-20 April 2017

Dico Luckyharto – Forest Peoples Programme

### Kapuas Hulu in a glance

Concessions map of Kapuas Hulu

Kapuas Hulu is home of Betung Kerihun NP (800,000 has.) and Danau Sentarum NP (200,000 has.) and as 'conservation district'.

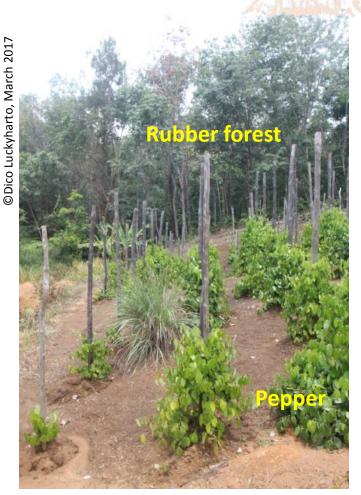

Dayak Suaid is one of Dayak subgroups that are living in Kapuas Hulu. One important area is Seberuang river which has a considerable forest landscape which acts as water catchment, water source, timber, food, hunting, fishing, gatherings and beauty.

#### Barriers / challenges to mainstreaming the activities

As in rubber that took around 5 decades to be accepted as beneficial to the peoples, it goes the same with pepper and coffee. Even for coffee, they have not tried yet

Agriculture landscape in Emperiang

Agriculture landscape in Bati

### **How communities try to solve barriers / challenges?**

- Inter-cropping
- Increase yield by using land optimally

Early stage inter-cropping

## How communities try to solve barriers / challenges?

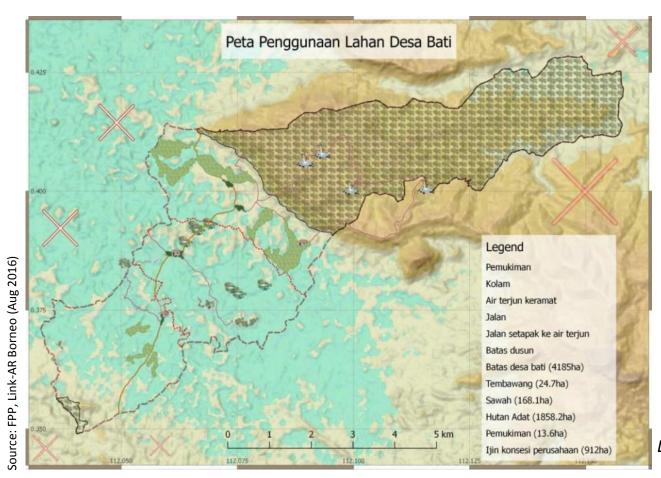

- Through their traditional knowledge
- Market access for their products
- Beauty for eco-tourism and conservation

Bati village head shows the fruits seedlings that will be planted around the garden

### How communities try to solve barriers / challenges?

#### Forest as beauty and conservation

Land use map of Bati

### **Recommendations**

- Strong customary and cultural bodies and laws
- One pilot project with good impact and result can spread easily to the surrounding
- The introduction of technology could be beneficial
