IPSI Case Study Summary Sheet

Please submit this form along with your case study. We ask that you keep your responses here as concise as possible. This information will be posted on the IPSI website unless otherwise requested. Please inform the IPSI Secretariat if there are any responses you would not like made public.

Basic Information

Title of case study (should be concise and within approximately 25 words)

Cooperation of Bamboo-Shoots-Farmers, Communities, and Government for farmland-green-treefrog (Zhangixalus arvalis) conservation in an agricultural landscape in southwestern Taiwan.

Submitting IPSI member organization(s)

Watch Nature Ecological Consultant Co., Ltd (WNECC)

Other contributing organization(s) (IPSI members and/or non-members)

Forestry and Nature Conservation Agency, ministry of Agriculture. (FNCA)

Chiayi Branch, Forestry and Nature Conservation Agency, ministry of Agriculture. (Chiayi Branch FNCA)

Tainan District Agricultural Research and Extension Station, ministry of Agriculture.

Shan-Lin Community Development Association. (SLCDA)

LCFTF Vegetable and Fruit Production Co-operative.

Author(s) and affiliation(s)

Chuang Meng-hsien ,Liu Fang-ju, Liu Tsung-Yu [Watch Nature Ecological Consultant Co., Ltd (WNECC)]

Chang Tai, Hsu Yu-Ching, Wang Cong-wei [Chiayi Branch, Forestry and Nature Conservation Agency, ministry of Agriculture.]

Lo Cheng-Tsung, Huang Jui-chang[Tainan District Agricultural Research and Extension Station, ministry of Agriculture.]

Sun Chia-Jung [Shan-Lin Community Development Association. (SLCDA)]

Lin Sheng-wei, Wu Yung-Cheng [LCFTF Vegetable and Fruit Production Co-operative.]

Format of case study (manuscript or	manuscript	Language	English
audiovisual)			

Keywords (3-5 key concepts included in the case study)

- government -community collaboration
- habitat-connectivity
- farmland-green-treefrog-friendly label scheme
- bamboo shoots farmers
- community-based conservation
 Date of submission (or update, if this is an update of an

existing case study)		
Web link (of the case study or lead		
organization if available for more		
information)

Geographical Information

Country (where site(s) or activities described in the case study are located – can be multiple, or even "global")

Chinese Taipei

Location(s) (within the country or countries – leave blank if specific location(s) cannot be identified)

Darlin township of Chiayi County, located in southern west part of Taiwan island

Longitude/latitude or Google Maps link (if location is identified)

https://maps.app.goo.gl/REDTNfb1Ck7qyugWA

Ecosystem(s) (please place an "x" in all appropriate boxes)

Forest	Grassland	Agricultural	Χ	In-land water	Coastal	
Dryland	Mountain	Urban/peri-urban		Other (Please specify)		

Socioeconomic and environmental characteristics of the area (within 50 words)

Chiayi County's Dalin Township is located on the Chia-nan Plain in the southwestern part of Taiwan. The Chia-nan Plain is an alluvial plain formed by several rivers and is one of Taiwan's major agricultural areas. This region is in subtropical monsoon climate zone, with rainfall primarily influenced by monsoons and terrain. In this area, the winters are dry, and the summers are rainy, with precipitation mainly brought by the plum rains and typhoons during the summer and the fall. It covers an area of 64.17 square kilometers and has a population of approximately 32,000 people.

Description of human-nature interactions in the area (land-use, traditional resource management practices etc. – within 50 words)

Dalin is located on the Chianan Plain, characterized by fertile soil and a well-developed irrigation system. The area is crisscrossed with farmlands, and despite agricultural transformation in recent years, Dalin still has 2,600 hectares of cultivated land, producing 12,000 metric tons of rice. The town also has approximately 800 hectares dedicated to bamboo shoot cultivation.

Contents

Note: The following fields are used for information about activities described in the case study or the production of the case study itself, and contents may vary depending on the nature of the case study. For example, a case study about on-the-ground activities may include the rationale, objectives etc. for the activities; a case study about a SEPLS-related policy may describe the policymaking process; or a case study describing a SEPLS may address particular practices used there. Please make an effort to fill as many fields as possible.

Status ("ongoing" or "completed") ongoing Period (MM/YY to MM/YY) 2018-

Rationale (why activities or policies described, or information shared in the case study are needed – within 50 words)

The endangered farmland treefrog (*Zhangixalus arvalis*) is endemic to Taiwan, and it has a small distribution range restricted to the plains of Yunlin, Chiayi, and Tainan counties. In the Chiayi area, *Z. arvalis* primarily inhabits bamboo plantations which were mainly privately owned. Due to crop transformation and other anthropogenic land-use change, the area of *Z. arvalis'* habitats were decreasing. Therefore, government - community collaboration were applied.

Objectives (goals of activities or policies described, or of producing the case study – within 50 words)

To explore the possibility of OECM in an agricultural landscape

To raise locals' awareness of farmland treefrog (Z. arvalis)

To maintain and restore the Z. arvalis's habitats

To increase habitat connectivity in an agricultural landscape

To guide consumers in purchasing safe and biodiversity-friendly produce

Activities and/or practices employed (within 50 words)

- Engaging local communities and bamboo shoot farmers.
- Treefrog-friendly label scheme development & implement.
- Farmland Green Treefrog (Z. arvalis) and habitat investigation.
- The Survey of Bamboo shoot production and marketing.
- Branding & outreach program

Monitoring methodology (e.g. GIS-based monitoring, citizen science, Resilience Indicators in SEPLS, survey - within 40 words)

Farmland Green Treefrog investigation: Visual Encounter Method (VEM) in combination with audio strip transects (AST) •

Results (within 50 words)

Ecological aspect

the number of farmers has increased from 12 to 24, and the area of fields awarded the label has gradually expanded from 6.4 hectares to 15.6 hectares by 2024.

Social aspect

- 1. The first group of certificated farmers initiated the formation of a production cooperative.
- 2. Besides Shanglin Community, the neighboring Zhonglin Community has also started participating in treefrog conservation actions, with the community conducting independent patrols.
- 3. The Dalin Township Office has gradually paid more attention to the treefrog conservation.
- 4. The Dalin Township Farmers' Association's 4-H Club has also included the story of the treefrog and bamboo shoots in their outreach programs.

Lessons learned (factors in success or failure, challenges and opportunities – within 40 words)

- key figures are crucial in facilitating locals participating in conservation action
- Conservation measures promoted in the name of eco-friendly agricultural practice must fully consider the habitat requirements of species.
- Farmers need to be gradually guided in their investment in eco-friendly agricultural practice.
- The Support from consumers or distribution channels is key to increasing farmers' confidence and continued participation.

Funding (any relevant information about funding of activities or projects described in the case study)

Chiayi Branch, Forestry and Nature Conservation Agency, ministry of Agriculture, supported this work under "Taiwan Ecological Network (TEN) program" and "The Mountain Village Green Economy Sustainable Development Project".

Contributions to Global Agendas

CBD Kunming-Montreal Global Biodiversity Framework (https://www.cbd.int/gbf/targets/)

Please place an "x" under a number to rate how much this case study contributes to each CBD Target.

Note 1: The number scale goes from 1, the lowest rating, to 5, the highest rating. N/A indicates "not applicable".

Note 2: Please only mark those to which the case study has or will actually contribute, not those to which it could potentially contribute in the future.

_				C	Contri	butio	n	
Target		Description	1	2	3	4	5	N/ A
	1	Ensure that all areas are under participatory, integrated and biodiversity inclusive spatial planning and/or effective management processes addressing land- and sea-use change, to bring the loss of areas of high biodiversity importance, including ecosystems of high ecological integrity, close to zero by 2030, while respecting the rights of indigenous peoples and local communities.						
	2	Ensure that by 2030 at least 30 per cent of areas of degraded terrestrial, inland water, and marine and coastal ecosystems are under effective restoration, in order to enhance biodiversity and ecosystem functions and services, ecological integrity and connectivity.						
1. Reducing threats to biodiversity	3	Ensure and enable that by 2030 at least 30 per cent of terrestrial and inland water areas, and of marine and coastal areas, especially areas of particular importance for biodiversity and ecosystem functions and services, are effectively conserved and managed through ecologically representative, well-connected and equitably governed systems of protected areas and other effective areabased conservation measures, recognizing indigenous and traditional territories, where applicable, and integrated into wider landscapes, seascapes and the ocean, while ensuring that any sustainable use, where appropriate in such areas, is fully consistent with conservation outcomes, recognizing and respecting the rights of indigenous peoples and local communities, including over their traditional territories.					X	
1. Reduc	4	Ensure urgent management actions to halt human induced extinction of known threatened species and for the recovery and conservation of species, in particular threatened species, to significantly reduce extinction risk, as well as to maintain and restore the genetic diversity within and between populations of native, wild and domesticated species to maintain their adaptive potential, including through in situ and ex situ conservation and sustainable management practices, and effectively manage human-wildlife interactions to minimize human-wildlife conflict for coexistence.						
	5	Ensure that the use, harvesting and trade of wild species is sustainable, safe and legal, preventing overexploitation, minimizing impacts on non-target species and ecosystems, and reducing the risk of pathogen spillover, applying the ecosystem approach, while respecting and protecting customary sustainable use by indigenous peoples and local communities.						
	6	Eliminate, minimize, reduce and or mitigate the impacts of invasive alien species on biodiversity and ecosystem services by identifying and managing pathways of						

	1		1	1	I	1		
		the introduction of alien species, preventing the introduction and establishment						
		of priority invasive alien species, reducing the rates of introduction and						
		establishment of other known or potential invasive alien species by at least 50						
		per cent by 2030, and eradicating or controlling invasive alien species, especially						
		in priority sites, such as islands.						
		Reduce pollution risks and the negative impact of pollution from all sources by						
		2030, to levels that are not harmful to biodiversity and ecosystem functions and						
		services, considering cumulative effects, including: (a) by reducing excess						
		nutrients lost to the environment by at least half, including through more						
	7	efficient nutrient cycling and use; (b) by reducing the overall risk from pesticides						
		and highly hazardous chemicals by at least 8half, including through integrated						
		pest management, based on science, taking into account food security and						
		livelihoods; and (c) by preventing, reducing, and working towards eliminating						
		plastic pollution.						
		Minimize the impact of climate change and ocean acidification on biodiversity						
		and increase its resilience through mitigation, adaptation, and disaster risk						
	8	reduction actions, including through nature-based solution and/or ecosystem-						
		based approaches, while minimizing negative and fostering positive impacts of						
		climate action on biodiversity.						
		Ensure that the management and use of wild species are sustainable, thereby						
	9	providing social, economic and environmental benefits for people, especially						
		those in vulnerable situations and those most dependent on biodiversity,						
ng		including through sustainable biodiversity-based activities, products and services						
nari		that enhance biodiversity, and protecting and encouraging customary						
fit-sl		sustainable use by indigenous peoples and local communities.						
use and benefit-sharing		Ensure that areas under agriculture, aquaculture, fisheries and forestry are						
put		managed sustainably, in particular through the sustainable use of biodiversity,						
se c		including through a substantial increase of the application of biodiversity friendly						
	10	practices, such as sustainable intensification, agroecological and other						
nab	10	innovative approaches, contributing to the resilience and long-term efficiency					Χ	
stai		and productivity of these production systems, and to food security, conserving						
sns i		and restoring biodiversity and maintaining nature's contributions to people,						
ybno		including ecosystem functions and services.						
s needs through sustainable		Restore, maintain and enhance nature's contributions to people, including						
рәә		ecosystem functions and services, such as the regulation of air, water and						
s n	11	climate, soil health, pollination and reduction of disease risk, as well as						
le'		protection from natural hazards and disasters, through nature-based solutions						
доәс		and/or ecosystem-based approaches for the benefit of all people and nature.						
2. Meeting people'		Significantly increase the area and quality, and connectivity of, access to, and						
Jee		benefits from green and blue spaces in urban and densely populated areas						
2. A	12	sustainably, by mainstreaming the conservation and sustainable use of						
		biodiversity, and ensure biodiversity-inclusive urban planning, enhancing native						
		biodiversity, ecological connectivity and integrity, and improving human health						
		and well-being and connection to nature, and contributing to inclusive and						

		sustainable urbanization and to the provision of ecosystem functions and services.			
	13	Take effective legal, policy, administrative and capacity-building measures at all levels, as appropriate, to ensure the fair and equitable sharing of benefits that arise from the utilization of genetic resources and from digital sequence information on genetic resources, as well as traditional knowledge associated with genetic resources, and facilitating appropriate access to genetic resources, and by 2030, facilitating a significant increase of the benefits shared, in accordance with applicable international access and benefit-sharing instruments.			
	14	Ensure the full integration of biodiversity and its multiple values into policies, regulations, planning and development processes, poverty eradication strategies, strategic environmental assessments, environmental impact assessments and, as appropriate, national accounting, within and across all levels of government and across all sectors, in particular those with significant impacts on biodiversity, progressively aligning all relevant public and private activities, and fiscal and financial flows with the goals and targets of this framework.			
Tools and solutions for implementation and mainstreaming	15	Take legal, administrative or policy measures to encourage and enable business, and in particular to ensure that large and transnational companies and financial institutions: (a) Regularly monitor, assess, and transparently disclose their risks, dependencies and impacts on biodiversity, including with requirements for all large as well as transnational companies and financial institutions along their operations, supply and value chains, and portfolios; (b) Provide information needed to consumers to promote sustainable consumption patterns; (c) Report on compliance with access and benefit-sharing regulations and measures, as applicable; in order to progressively reduce negative impacts on biodiversity, increase positive impacts, reduce biodiversity-related risks to business and financial institutions, and promote actions to ensure sustainable patterns of production.			
3. Tools a	16	Ensure that people are encouraged and enabled to make sustainable consumption choices, including by establishing supportive policy, legislative or regulatory frameworks, improving education and access to relevant and accurate information and alternatives, and by 2030, reduce the global footprint of consumption in an equitable manner, including through halving global food waste, significantly reducing overconsumption and substantially reducing waste generation, in order for all people to live well in harmony with Mother Earth.		х	
	17	Establish, strengthen capacity for, and implement in all countries, biosafety measures as set out in Article 8(g) of the Convention on Biological Diversity and measures for the handling of biotechnology and distribution of its benefits as set out in Article 19 of the Convention.			

18	Identify by 2025, and eliminate, phase out or reform incentives, including subsidies, harmful for biodiversity, in a proportionate, just, fair, effective and equitable way, while substantially and progressively reducing them by at least \$500 billion per year by 2030, starting with the most harmful incentives, and scale up positive incentives for the conservation and sustainable use of biodiversity.			
19	Substantially and progressively increase the level of financial resources from all sources, in an effective, timely and easily accessible manner, including domestic, international, public and private resources, in accordance with Article 20 of the Convention, to implement national biodiversity strategies and action plans, mobilizing at least \$200 billion per year by 2030, including by: (a) Increasing total biodiversity related international financial resources from developed countries, including official development assistance, and from countries that voluntarily assume obligations of developed country Parties, to developing countries, in particular the least developed countries and small island developing States, as well as countries with economies in transition, to at least \$20 billion per year by 2025, and to at least \$30 billion per year by 2030; (b) Significantly increasing domestic resource mobilization, facilitated by the preparation and implementation of national biodiversity finance plans or similar instruments according to national needs, priorities and circumstances; (c) Leveraging private finance, promoting blended finance, implementing strategies for raising new and additional resources, and encouraging the private sector to invest in biodiversity, including through impact funds and other instruments; (d) Stimulating innovative schemes such as payment for ecosystem services, green bonds, biodiversity offsets and credits, and benefit-sharing mechanisms, with environmental and social safeguards; (e) Optimizing co-benefits and synergies of finance targeting the biodiversity and climate crises; (f) Enhancing the role of collective actions, including by indigenous peoples and local communities, Mother Earth centric actions[1] and non-market-based approaches including community based natural resource management and civil society cooperation and solidarity aimed at the conservation of biodiversity; (g) Enhancing the effectiveness, efficiency and transparency of resource provision and use;			
20	Strengthen capacity-building and development, access to and transfer of technology, and promote development of and access to innovation and technical and scientific cooperation, including through South-South, North-South and triangular cooperation, to meet the needs for effective implementation, particularly in developing countries, fostering joint technology development and joint scientific research programmes for the conservation and sustainable use of biodiversity and strengthening scientific research and monitoring capacities, commensurate with the ambition of the goals and targets of the Framework.			

	Ensure that the best available data, information and knowledge are accessible to			
	decision makers, practitioners and the public to guide effective and equitable			
	governance, integrated and participatory management of biodiversity, and to			
	strengthen communication, awareness-raising, education, monitoring, research			
21	and knowledge management and, also in this context, traditional knowledge,		Х	
	innovations, practices and technologies of indigenous peoples and local			
	communities should only be accessed with their free, prior and informed			
	consent,[2] in accordance with national legislation.			
	Ensure the full, equitable, inclusive, effective and gender-responsive			
	representation and participation in decision-making, and access to justice and			
	information related to biodiversity by indigenous peoples and local			
22	communities, respecting their cultures and their rights			
	over lands, territories, resources, and traditional knowledge, as well as by			
	women and girls, children and youth, and persons with disabilities and ensure			
	the full protection of environmental human rights defenders.			
	Ensure gender equality in the implementation of the Framework through a			
	gender-responsive approach, where all women and girls have equal opportunity			
	and capacity to contribute to the three objectives of the Convention, including			
23	by recognizing their equal rights and access to land and natural resources and			
	their full, equitable, meaningful and informed participation and leadership at all			
	levels of action, engagement, policy and decision-making related to biodiversity.			

UN Sustainable Development Goals (SDGs) (https://sustainabledevelopment.un.org/sdgs)

Please place an "x" in the "direct" or "indirect" boxes next to any of the UN Sustainable Development Goals to which the work described in this case study contributes as appropriate. Note: please mark only those that the case actually has made or is making a contribution, not those to which it could make a potential contribution in the future.

SDG	Description	Direct	Indirect
1 NO POVERTY	End poverty in all its forms everywhere		
2 ZERO HUNGER	End hunger, achieve food security and improved nutrition, and promote sustainable agriculture		
3 GOOD HEALTH AND WELL-BEING	Ensure healthy lives and promote wellbeing for all at all ages		х
4 QUALITY	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all		
5 GENDER EQUALITY	Achieve gender equality and empower all women and girls		
6 CLEAN WATER AND SANITATION	Ensure availability and sustainable management of water and sanitation for all		
7 AFFORDABLE AND OLEAN ENERGY	Ensure access to affordable, reliable, sustainable and modern energy for all		
8 DECENT WORK AND ECONOMIC GROWTH	Promote sustained, inclusive and sustainable economic growth, full and productive employment, and decent work for all		
9 MOUSTRY IMMOVATION AND INFRASTRUCTURE	Build resilient infrastructure, promote inclusive and sustainable industrialisation, and foster innovation		
10 REDUCED INEQUALITIES	Reduce inequality within and among countries		
11 SUSTAINABLE CITIES AND COMMUNITIES	Make cities and human settlements inclusive, safe, resilient and sustainable		
12 RESPONSIBLE CONSUMPTION AND PRODUCTION	Ensure sustainable consumption and production patterns	Х	
13 CLIMATE ACTION	Take urgent action to combat climate change and its impacts		Х

14 BELOW WATER	Conserve and sustainably use the oceans, seas and marine resources for sustainable development		
15 the on Land	Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation, and halt biodiversity loss	х	
16 PEACE JUSTICE AND STRONG INSTITUTIONS	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels		
17 PARTINERSHIPS FOR THE GOALS	Strengthen the means of implementation and revitalise the global partnership for sustainable development
